Lenovo Ideapad 330S Review

So, I have a new laptop that I got through my repair and support plan with Curry's PC World. After my experience with the last generation Lenovo Ideapad 320S I3 model, I went for the more refined version but went for a specification boost. So I choose the most spec'ed out version of the 330S. Although they have changed the colour of this model to a dark midnight blue, I still enjoy using this laptop. There are a few small things that I would like to cover before giving a final verdict of weather or not this laptop is worth the purchase.

Keyboard: The keyboard on the last iteration of this product was an amazing keyboard, I slaved away many hours of writing assignments that were due in and completed last minute on that keyboard. I even chose to use my laptop over the university computers because I found it easier to type on. Now this keyboard threw me off a little to me it does seem like the have made the keys a bit smaller and transitioning from one laptop to the other wasn't a welcome change but if you are going from using a standard membrane keyboard from the university or college computers to this laptop it would be like going from using a HP stream to game on to using a custom built pc with a i9 and 1080 ti. I mean this feeling might be me because my laptop was away for two months straight at a repair centre prior it being written off.

The Power Button: I am not really sure if they made the right decision to move the power button from the keyboard to just above the keyboard. I thought It was much more sleek to have the home button as a key on the keyboard I know that some people did not like that. I understand this is down to preference.

Conclusion: Honest opinion if you are able to get this laptop for the price that I paid for it I would say buy it in a heartbeat. I personally would not pay more that £700 for this type of laptop because as soon as you start looking in that price range you are looking at a more premium range of laptops like the HP envy 13".

Spesification

Processor: I7 8th gen
Storage: 512 SSD
RAM: 8GB
Screen Size: 14"
Price (That I paid) : £540
